Launch Support

- We offer on-site technical support to customers both during and after implementation, aiming to accelerate launch schedules while maintaining high quality standards.

- Coordinate with Launch Team members to verify, isolate and diagnose problems, and develop workarounds or actual code fixes to resolve issues where possible.

- Coordinate with Product, Engineering, QA, and Support teams to provide assistance in identifying, reporting and resolving customer- impacting product issues.

Launch Support

- Interact effectively at all levels within partners' businesses as well as within customers to ensure the launch process is optimized

- Provide regular reports for management that measure the effectiveness of the Launch Support Engineer function..

Third Party Containment and Inspection Solutions (GP12 & CS1-2).

- We sort and inspect products to identify and contain non-conforming items.
- Our company uses experienced inspectors to handle your products.
- We can offer final inspections at their location in driving distance.
- Daily reports on quality metrics and traceability.
- We set the standard, from start to finish, to deliver quality parts, the first time, every time.

Benefits our customers have received from our services.

- Reduced Scrap
- Labor and Operating Costs
- Higher Manufacturing Quality
- Improved Supplier Quality
- Qualified, Thorough Reporting
- Improved Customer/Supplier relations
- Improved and Accurate Output

Rework and Refurbishment Solutions

We have the knowledge, skills and resources to bring your parts back into specification. Once an issue is found we can recommend the most appropriate rework to meet the specs.

We have the ability “to renew or to restore to a new condition and/or appearance”. Re-build, touch-up for both functional and cosmetic defects.

Resident Liaison/ Technical Representation/ Field Engineer

Using the relationships that we have built with our customers we have the ability to blend their talents and resources for your design.

As your liaison we will direct, manage, and keep your project on task with a team that has the ability to understand and clearly communicate your technical specifications, engineering and manufacturing concerns.

We minimize charges and scorecard's affectation through our proactive and immediate support.

Resident Liaison / Technical Representation / Field Engineer PROACTIVE

- We emphasize the importance of regular meetings with key personnel at your suppliers, quality control, manufacturing, and assembly teams. These meetings aim to:
 - Build strong relationships between you and these teams.
 - Ensure they effectively manage and address customer feedback.
 - Identify and report product applications.

Resident Liaison / Technical Representation / Field Engineer PROACTIVE

- Educate customer on your product to mitigate opportunity for excessive costs.
 - Encourage continuous improvement initiatives and actively participate as a key member of the quality team to ensure concerns are closed out effectively.

- Pin-point analysis - Identify areas of opportunity for innovation.

- Promote excellence in
- customer service and problem solving.

REACTIVE**

- Help identify root cause and assist in implementing short term solutions as well as to provide samples, photographs and a comprehensive detailed problem description.
- Manage customer issues and concerns immediately while effectively minimizing disruption and establishing containment actions.
- Hands-on assistance and supervision to coordinate containment activities, integrate visual aids and clear work instructions for effective containment actions.

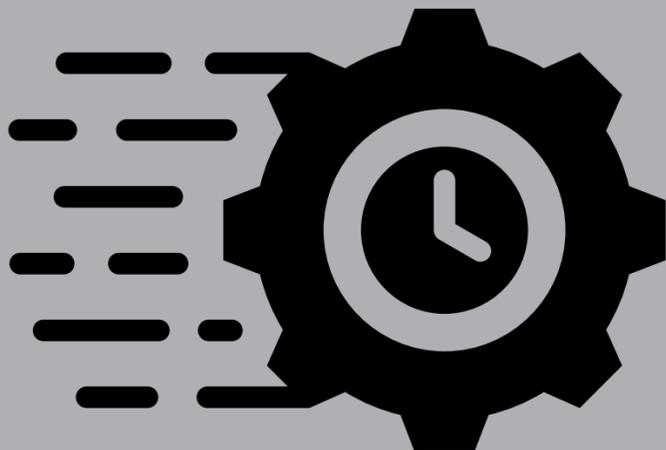

Secondary Operations / Light to Moderate Assembly / Kitting / Sequencing and Final Packaging

Our Light Assembly, Kit Building and Packaging services can give your company a competitive advantage as a manufacturer.

We can group the product from multiple vendors and build your Kits for you or simply move your product into customer dunnage or specialty packaging.

Just-in-Time delivery of kits, assemblies, and subassemblies will reduce your warehousing costs and overhead while allowing material where you need it, when you need it.

We offer quality management services for businesses in North America.

We can:

- Review your existing quality processes: We'll assess how well your current system functions.
- Help with ISO implementation: If you're working towards ISO certification, we can guide you through audit requirements and train your staff.
- Provide quality training: Our company offers training programs to certify your employees in various quality tools and procedures used in global manufacturing, like PPAP, APQP, and internal audits.
